Dear Hiring Manager,

I have been an I.T. professional serving companies in various industries for over 20 years. For roughly the past 15 years I have worked as an I.T. Project Manager, with prior experience in Network Engineering and Operations. Additionally, I am updating my education and will earn a Bachelor of Science in Business and Information Technology Management this summer. I am motivated, enthusiastic, and ready for an opportunity to apply and expand upon my experience with your company.

I joined Meritor's Information Services team in May of 2018. As a Senior Infrastructure Project Manager, I have led cross-functional teams through the process of integrating several acquired manufacturing sites and aligning their Network, Security, and Desktop services with Meritor's corporate standards. During this process I developed a site integration run book that can be referenced for future mergers and acquisitions.

Prior to Meritor, I served for two years as a Senior Network Project Manager with Ally Bank. During that time, I successfully coordinated Ally's F5 Load Balancer refresh / technology upgrade project, as well as network hardware refreshes at 11 remote offices. I also managed a significant project to migrate critical Ally systems from a 3rd party colocation to various Ally sites, in part to facilitate future AWS Cloud services. These projects allowed me to collaborate with various teams and Business Units within Ally, while learning their day to day internal processes.

Prior to my role with Ally and over the course of my career, I have worked as both a Network Infrastructure Project Manager and network Analyst for companies like GM, IBM, Dow Chemical, and Flagstar Bank. My experience at these companies has helped me grow as a project manager, group leader, and person, through the forging of solid business relationships with team members, executives, vendors, and other corporate partners.

I have supported many different systems and completed many different projects during my I.T. career. However, there is something more important to me than the work itself, and that is the people I work with. I feel that my value has had less to do with successful completion of projects, and more to do with my work ethic, strong customer service approach, willingness to share knowledge with others, and ability to forge positive relationships with my teams. I want to spend the rest of my I.T. career with an organization that values its people the same as its business. If you are part of such an organization, I am available at your earliest convenience for an interview. Thank you for your time and consideration.

Jim Teller
Sr. I.T. Project Manager
